

The QuiC Project

Zachary Bolon, Max Caron, Leydi Maya, Devin
Renn, Roberto Sierra

Description of the project

We built a modern study platform that transforms the way students learn. Our website allows students to easily create, access and organize flashcards into sets and folders. With our intuitive platform, users will be able to ready and excited to start learning the second they visit our website. Our goal is to help students learn faster and retain information better by creating an easy and interactive learning environment.

The tools that were used

Github (★★★★★)

- Stored our remote repository

Github Project Board (★★★★)

- The project tracker we used to organize and plan out tasks

PostgreSQL (★★★★★)

- The database

VS Code (★★★★★)

- Our preferred text editor

Handlebars (★★★★★)

- Allowed us to display UI while also allowing for easy UI functionality

NodeJS (★★★★★)

- Hosted our application server

Render (★★★★)

- The cloud service we used to deploy our application

Chai & Mocha (★★★★)

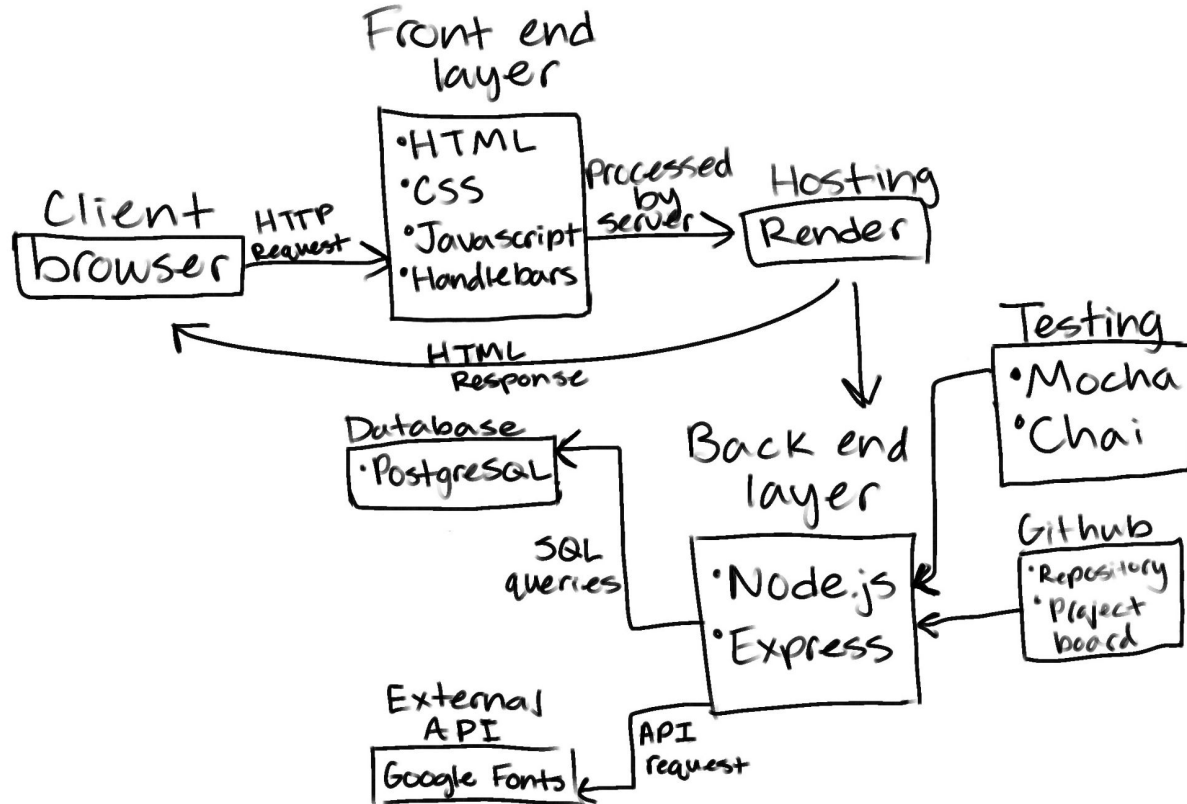

- Our testing tools

Scrum Framework (★★★★★)

- The primary framework we used

Architecture Diagram

Challenges

- Parts of project depending on other parts that were not yet completed
 - Made sure to communicate when we could
 - Talked about weekly plans, when teammates were committing code others needed
- Scheduling/communication issues
 - Made sure to communicate clearly in labs when we were all present
- Profile page database queries
 - 7 different database queries used to get user data
 - Keeping track of all of this data
 - Passing this data to hbs page correctly
 - Had to use outside resources to make sure everything was correct
- Edit profile/folder/set/flashcard buttons
 - Populating modal fields with previous info
 - Keeping modals open with error messages
 - Correctly redirecting/rendering pages after edits
 - Correctly updating tables in database
 - Had to do extensive research/use outside resources to resolve these issues

Future Scope/Enhancements

Games

- Create or partner up with educational game companies to create games for an enjoyable experience
- Score points with games, earn points for prizes such as profile customization, background, color of website, etc.

Leaderboard

- Have users compete against each other and show weekly/monthly top scorers

UI

- Improve the webpage, make it look cleaner, more comic book aspects, fix anything that needs improvement
- Utilize in making it feel “more than just a study website”, have the user feel like they are in another world within the education realm

Now for the Demo
